 - Pie your Prof
 - Trick or Treat Street

Breast Cancer Awareness Month

MYTH:

You can't get breast cancer if there is no family connection

People will always feel a bump

There is an age minimum and maximum

Breast pain is a definitive sign

Carrying a phone in your bra can cause cancer

All breast cancers are the same

Men cannot get breast cancer

TRUTH:

About 2/3 of patients diagnosed have no family history

Most lumps in breasts are not cancer, and not everyone can feel a lump

Risk of breast cancer increases as one ages.

Breast pain is usually not a sign

There is not scientific correlation found

They are not the same, there are specific cells in the breast and each type has different features and considerations.

It is more uncommon in men but about 2,000/year in the U.S. are diagnosed

Introducing: Nnenna Ajawara - Accelerated Liason

Most recent concert I have attended is T-Pain and Lil Jon.

Fun fact is this is my 3rd degree from Regis.

I met with my professor weekly for patho to understand the concepts.

I recorded all my lectures so that anything that I missed I can go back and listen to it. I also wrote all my notes the day after class to test my knowledge

Test taking tips: study groups, record lectures, hand write your notes after, meet with prof, and YouTube

Fundraiser for Kai

This past month, RSNA held a fundraiser to raise money to plan a tree in honor of Kai Mitchell.

Their friends, family, and RSNA thank everyone who supported us in any way they could.
